

WBC Trap Supply List:

For *each* WBC trap, you will need:

- All Green Bucket or Universal Trap (1 per corn field, two per dry bean field)
- WBC Pheromone Lure (five lures per trap per season = 15 weeks of monitoring)
- Fumigant or Vapor strip (one - two strips per trap per season)
- 6 foot wooden stake or metal t-bar from your local lumber or hardware store (one per trap)
- Long zip tie, bracket or other means to hold or hang the trap from the stake/t-bar (see images for suggestions)

Items 1 to 3 can be purchased at the same time from the Trap Supply Companies below. Item #s (where available) have been provided to help ensure that you are ordering the correct item from each company.

1. **All Green Bucket or Universal Trap – 1 per corn field, 2 per dry bean field.** Bucket traps are the preferred trap for WBC and can be used for several years so if you already have traps that you have been using for WBC, those are fine. Do not use traps that were used to monitor for a different species of moths as the trap will be contaminated with the pheromone of that pest and will be less effective at attracting WBC.
2. **WBC Pheromone Lures - 5 lures per trap per season.** Preferred WBC pheromone lure brands include “Scentry” or “Trece”. One lure is placed in the trap and replaced with a new one every 3 weeks. Lures must be stored in the freezer prior to use and can be used the following year if kept in the freezer. We recommend that lures be used within two years of purchase. It is cost effective to order a case of 12 or 25 lures and have them for next year too. Discard used lures back at home or office (not at the trap site).
3. **Fumigant or Vapor Strips - 1 per trap per season.** These are plastic strips impregnated with an insecticide and are placed in the bottom of the bucket trap. The strips kill the moths so that they don’t fly away when you open the trap to count them. 1 strip will last for at least 2 months. We recommend that you tape the strip down to along the inside wall of the bucket so that it does not fall out when you dump the dead moths out each week to count them. Always use gloves when handling these insecticidal strips.
